

## cajaMax® POS Software Overview

The cajaMax® POS (Point-of-Sale) Software System works to give you a completely automated retail management system that supports bar coding, pole displays, cash drawers & receipt printers, and integrates with all the back-end operations in real time. Replacing stand-alone cash registers or separate retail software, our POS software empowers managers with all the audit trails needed for end-of-day reports that allow cash registers to be secured so they can be tallied individually. What's more, by maintaining all transaction information in the database, the cajaMax® POS (Point-of-Sale) Software System enables you to up-sell and cross-sell your other products and services.

The cajaMax® POS (Point-of-Sale) Software System uses the latest technology and has been certified with the "Designed for Windows® XP®" from Microsoft®. cajaMax® is one of the few products to have received the "Works for Windows Vista™" certification for the new Microsoft® Windows Vista™ operating system released on January 30<sup>th</sup> 2007. It has the USB™ certification since cajaMax® uses a USB protection key to eliminate the possibility of making illegal copies of the software (cajaMax®) by malicious users (hackers), and already has a distribution agreement for Adobe® Reader® from the Adobe® Corporation.

The cajaMax® POS (Point-of-Sale) Software System has been strictly designed and oriented for the small and mid size business market; it is a high quality product, it's competitive, reliable and affordable for the consumers in comparison with other products in the market.
